

VISUAL CAREER PROFILE & PROJECT CASE STUDIES

Moch. Sidik Andina Aris

Senior Software Engineer / Senior .NET / Full Stack Developer

Enterprise Application Development · Technical Lead Candidate · AI/NLP-Based Knowledge Search Research. I build enterprise, data-processing, and web-based software solutions across government-scale platforms, university systems, healthcare administration, ERP/HRIS products, document automation, and AI/NLP-based knowledge search research.

SNAPSHOT

Career at a glance

6+

Years of software development exposure

5+

Years of professional .NET experience

15+

Document automation client projects handled

10–15

University system modules monitored/handled

DOMAIN MAP

Project domains represented

POSITIONING

Target career direction

Primary target: Senior Software Engineer / Senior .NET / Full Stack Developer / Technical Lead Candidate. Preferred setup: Remote or Hybrid, with an international-ready portfolio and case-study-oriented project presentation.

TECHNICAL STACK

Core technologies & delivery skills

BACKEND

C#, .NET Core, ASP.NET MVC, REST API, Web API, Microservices

FRONTEND

Angular, TypeScript, JavaScript, HTML, CSS

DATABASE

SQL Server, Tiberio, MySQL

CLOUD & TOOLS

Azure, Docker, GitHub, Jira, HP/OpenText Exstream

ANALYSIS & DELIVERY

System Analysis, Requirement Gathering, Scrum, Agile, User Coordination, Cross-Team Support, Pre-QA Testing

EXPERIENCE

Professional experience overview

My professional experience has gradually evolved from desktop-based document automation, ERP/HRIS customization, and university system development into larger-scale enterprise platforms and research-based AI/NLP system design. This section highlights the context of each role, the type of system involved, the main contribution delivered, and the technical environment used.

2024**Selected Freelance Engagement****Automotive Enterprise Client — Senior Software Engineer / .NET Developer**

Developed web-based modules for automotive promotional campaigns, service events, and operational workflows. Adapted to client-driven requirements, separated repositories, and short-cycle requests.

Focus: .NET Core, HTML, JavaScript, SQL Server, Agile/Scrum

Sep 2022 – Sep 2023**The Software Practice Pte. Ltd.****Healthcare Administrative Information System — Senior .NET Developer**

Contributed remotely to a healthcare administrative system with cross-country collaboration, daily Scrum routines, BA/tester coordination, and development standardization.

Focus: .NET Core, REST API, Azure, SQL Server, GitHub, Microservices, Scrum

Feb 2020 – Jan 2021**PT Sakura System Solution****Spisy 10 ERP/HRIS — Junior C# Programmer**

Developed ERP/HRIS modules for client-specific customization, bug fixing, feature enhancement, and delivered an organization-structure module with Excel export logic.

Focus: ASP.NET MVC, JavaScript, SQL Server, GitHub, API integration

Sep 2023 – Sep 2024**PT Qualysoft Centre Excellence****Cortex / PSIAP — Senior Full Stack Developer**

Worked on a government-scale tax platform involving complex workflows, dynamic rules, notification/message features, validation, approval, and microservices-oriented delivery.

Focus: .NET Core, Angular, TypeScript, REST API, Tiberio, Docker, Jira, Microservices

Jan 2021 – Jan 2023**Bina Nusantara University****Enrichment Management System — System Analyst & Senior Programmer**

Led development and enhancement of student program workflows covering registration, program selection, logbook, monthly/final reports, and multi-role validation workflows.

Focus: .NET Core, ASP.NET MVC, JavaScript, Web API, SQL Server, PHP

Jan 2019 – Feb 2020**PT Quadrant Sinergy International — RDS Group****Document Generation & Sanity Check Automation — IT Developer**

Developed automated document-generation applications and independently handled around 15 client projects for banking and insurance document processing.

Focus: C# Windows Forms, SQL Server, HP/OpenText Exstream, FTP/cloud

PROJECTS

Enterprise platforms & administrative systems

Selected case studies representing government-scale platforms, university workflows, and ERP/HRIS customization. These projects show enterprise feature delivery, system analysis, user coordination, and technical adaptation across complex domains.

GOVERNMENT-SCALE TAX PLATFORM

Cortex / PSIAP

Full-stack feature delivery in a complex tax platform involving validation, approval, dynamic rules, and microservices-oriented development.

UNIVERSITY MANAGEMENT SYSTEM

BINUS Enrichment Management System

Student program workflows covering registration, program selection, logbook, reporting, and multi-role validation across different roles.

ERP / HRIS PRODUCT

Spisy 10 ERP/HRIS

Product customization, bug fixing, and organization-structure module with Excel export and position-mapping logic.

Project value

These projects demonstrate the ability to work with enterprise workflows, multi-role processes, technical ambiguity, and production-oriented feature delivery. The focus is not only coding, but aligning technical implementation with operational rules, validation logic, users, and business constraints.

Enterprise workflows

Validation logic

Multi-role users

Cross-team coordination

Feature delivery

PROJECTS

Automation, healthcare & automotive modules

These case studies use safe mockups for sensitive work. The visuals illustrate the type of operational systems involved without exposing confidential screenshots, production URLs, or client data.

DOCUMENT AUTOMATION

RDS Document Generation & Sanity Check

Scheduled FTP/cloud processing, print-ready PDF generation, validation logs, failed-record handling, and post-process client notification.

HEALTHCARE ADMINISTRATION

Healthcare Administrative Information System

Remote cross-country development for administrative workflows with Scrum routines, BA/tester coordination, and development standardization.

AUTOMOTIVE ENTERPRISE CLIENT Automotive Promotional & Operational Modules

RESEARCH PROTOTYPE

AI/NLP enterprise knowledge search

KnowLens is a research-based prototype concept developed as part of my master's thesis in Master of Information Technology at Universitas Indonesia. The project explores how NLP and semantic search can support enterprise knowledge management by helping users retrieve relevant knowledge based on query meaning, metadata, access scope, and document context.

The public portfolio version is presented as a static HTML demo with dummy responses to avoid exposing backend logic, internal data, or confidential documents. It shows the intended flow of searching knowledge, generating answers, and uploading knowledge metadata.

Prototype capabilities

- Context-aware search flow
- Answer generation simulation with traceable sample sources
- Knowledge injection / upload metadata flow
- Static GitHub Pages-friendly demo
